PROFESSIONAL SUMMARY

Senior Frontend Engineer with 5+ years building performant, secure, and scalable web applications across GIS, logistics, and SaaS. Blends human-first product thinking with strong engineering rigor leading cross-functional teams, shaping UI/UX, and shipping production systems that move business metrics. Expert in React/Next.js, TypeScript, Node.js, and modern mapping stacks (Leaflet, Google Maps, Mapbox), with proven results: improving conversion, cutting load times, and enabling data-driven decisions for enterprise clients. Passionate about mentoring engineers, simplifying complex geospatial data for users, and driving delivery with CI/CD and cloud best practices.

TECH STACK

Front End

HTML5, CSS3/Sass, Tailwind CSS, JavaScript (ES6+), TypeScript, React.js, Next.js, Redux/RTK, React Query, React Native, Angular, Vue.js, Webpack/Vite, Jest, React Testing Library, Selenium

Back End

Node.js, Express, NestJS, REST & GraphQL APIs, Microservices, Serverless

Data Stores

PostgreSQL, MongoDB, Redis

Maps & Geo

Leaflet, Google Maps Platform, Mapbox, GeoJSON, Turf.js

Cloud & DevOps

AWS, GCP, Azure, Docker, Kubernetes, Nginx, CI/CD (GitHub Actions/Jenkins), Cloudflare, Firebase

OS & Tooling

Linux/Ubuntu, macOS, Windows, Git, Postman, Storybook

EXPERIENCE

Frontend Lead | Polaris Digitech Limited | Lagos, Nigeria

(August 2024 – Present)

Land Surveying & GIS consulting; Location Intelligence, Mapping, Google Workspace/GCP onboarding, and geo-enabled decision support across Nigeria.

- Led the end-to-end development of the Lagos State Survey Charting Application, integrating Vertex AI and advanced GIS layers to automate land charting workflows for surveyors and the public, reducing manual processing time and boosting charting throughput.
- Developed the website for Painite Energy, a client-facing corporate platform designed to strengthen the client's digital presence and highlight service offerings, developed with a focus on SEO, accessibility, and responsive design for better user engagement.
- Led the development of MTN Nigeria's *GeoLock Solution*; a tool to geolock Fixed Broadband devices (especially 5G) to serving sites meeting specific KPIs, ensuring optimal signal quality, compliance, and network performance across targeted service areas.
- Developed a Geospatial Data Server Platform, providing clients with a centralized tool for managing, visualizing, and styling spatial datasets. The system supports proximity searches (nearest-point lookups), data rendering as map tiles, and both simple and advanced styling capabilities. This tool significantly improved the company's spatial data handling, client-side analytics capabilities, and saved a client \$100k annual subscription for similar tools.
- Partnered cross-functionally with GIS analysts, backend engineers, and DevOps teams to build scalable, fault-tolerant geospatial systems that handle large data volumes efficiently using React, Node.js, PostgreSQL/PostGIS, and cloud-based geospatial APIs.
- Established frontend engineering standards, performance budgets, accessibility reviews, version control workflows, and code review best practices; which reduced regression bugs and improved maintainability.

Senior Frontend | Polaris Digitech Limited | Lagos, Nigeria

May 2023 – 2024 July)

- Collaborated in building the PDL Address Management Portal (AMP), a geo-KYC solution allowing banks and financial institutions to verify customer addresses in compliance with Central Bank of Nigeria (CBN) guidelines, enhancing fraud detection and regulatory compliance.
- Directed the creation of the Polaris Digital Address Verification Platform, utilizing geolocation APIs and cloud-based verification models to achieve ~80% accuracy improvement in address validation and verification efficiency.
- Architected the Channel Locator for Nigerian banks, enabling visualization of socio-economic clusters, competition density, and demand heatmaps for data-driven branch planning and market expansion.
- Redesigned the corporate PDL website with SEO optimization, structured data, and content performance tracking, boosting organic reach and improving user engagement metrics.
- Automated cloud deployments and improved CI/CD pipelines for the AXA Mansard Risk Geo Platform, enabling faster feature delivery, better scalability, and a 99.9% uptime SLA.
- Co-led the revamp of MTN Nigeria Coverage Map, using React, Leaflet, Spectrum, Google Maps API with layered network KPIs and real-time location insights; improved user comprehension of coverage and reduced support queries.

Tech: React, Next.js, TypeScript, Redux Toolkit, Leaflet, Google Maps API, PostGIS, Node.js, Express.js, PostgreSQL, Redis, AWS, GCP, Docker, Nginx, Jest, CI/CD (GitHub Actions/Jenkins), Cloudflare

Impact:

- Increased enterprise GIS platform adoption by 40% through UI modernization and real-time geospatial data visualization.
- Improved data accessibility and decision-making speed for enterprise clients such as MTN Nigeria and AXA Mansard.

- Delivered scalable client solutions that reduced query time and improved analytics visibility across business verticals.

Software Engineer | TechSpice | Lagos, Nigeria

(January 2021 - 2023 April)

Software company building bespoke products to client requirements.

- Developed and maintained multiple full-stack products; improved user engagement ~30% and reduced page load times ~20% via code-splitting, caching, and SSR.
- Built BI dashboards (from 0 → 1) for real-time sales/stock visibility; recognized by the COO/CFO for actionable reporting and reliability.
- Delivered REST/GraphQL services and improved API latency ~30% via query optimization and caching.
- Containerized microservices with Docker and set up CI/CD, improving release velocity and environment parity.
- Re-designed key client frontends with modern UI/UX patterns, boosting session duration and conversion within weeks.

Tech: React/Next.js, TypeScript, Node.js, Express, GraphQL, MongoDB, PostgreSQL, Docker, AWS/GCP, Jest, Redux

OTHER EXPERIENCES

Software Engineer (Contract) | Blood Gland | Lagos, Nigeria

(January 2021 - December 2021)

Software Engineer (Intern) | GIIT | Lagos, Nigeria

(May 2019 - December 2020)

PROJECT HIGHLIGHTS

-
- Survey Charting (PDL): Vertex AI + GIS layers to simplify survey workflows; improved throughput and reduced manual effort.
 - Digital Address Verification (PDL) : Geo-KYC platform; ~80% improvement in validation accuracy; modular rules engine for regional policies.
 - MTN Coverage Map: Multi-layer React + Leaflet visualization of network KPIs with location search, clustering, and lazy-loaded tiles.
 - Channel Locator (Banking): Demand/competition heatmaps, clustering, and catchment analysis for branch planning.
 - AXA Mansard Risk Geo: Cloud-native risk assessment with observability, release automation, and analytics dashboards.

LEADERSHIP & COLLABORATION

- Led squads of 3–5 engineers; owned sprint planning, estimates, code reviews, and mentoring.
- Established frontend guild practices: architecture RFCs, Storybook, testing standards, performance budgets.
- Partnered with product, GIS analysts, and stakeholders to translate complex location intelligence into intuitive UIs.

EDUCATION

B.Eng., Computer Engineering — University of Benin (2019)
